Fivetran + dbt Labs

dbt Wizard

Your personal dbt agent — wherever you work

One agent simplifying your analytics engineering workflows

dbt Wizard is an AI agent built for analytics engineering, grounded in your dbt project with rich and native context on lineage, tests, contracts, and metric definitions. Unlike generic coding assistants or tools, dbt Wizard natively understands your dbt projects, validates its own work, and incorporates governance and auditability by default.

dbt Wizard

The AI agent layer with semantic knowledge across the dbt platform. Available as a dedicated workspace and embedded in dbt Studio.

dbt Wizard CLI & Desktop App

Wizard CLI is a terminal-native agent, while Wizard Desktop brings the same governed workflow to a visual interface. Whether on dbt platform or self-hosted.

Ship your best dbt work without leaving your workflow

Explore – Ask a question and get a get an answer grounded in your project's real lineage, contracts, and semantic definitions instantly. Engineers validate assumptions mid-build; anyone else gets a trustworthy answer without opening a ticket.
Investigate - Tell Wizard what broke and it will trace your lineage, propose a fix, and validate the change before surfacing the differences for review.
Build - Describe what you need and receive a validated model, tests, docs, and semantic definitions. All at once. All grounded in your existing project.
Refactor - Outline your change and Wizard updates every file that needs to change. Rename a model and the references follow allowing for efficient refactoring, without the risk.
Ship - Get answers rooted in your defined metrics, traceable to the models and definitions your team already trusts — all without opening a ticket.

Fivetran + dbt Labs

The data foundation for agents you trust

Learn more at www.getdbt.com/product/dbt-wizard

Knows your data, not just your code

Self-validates before you review

Governed and auditable by default

Zero setup. Zero maintenance.

dbt Wizard

High-precision tool orchestration

Stay in flow from question to PR

No context hunting, less token waste

Validates its own work

"What really sets the dbt Wizard apart is its precision in identifying and resolving bottlenecks. It doesn't just suggest code; it understands our existing tests and lineage well enough to troubleshoot issues almost instantly. This has significantly reduced our build times and allowed us to scale our dbt project with total confidence."

`- Vishal Kaviraj, AVP - Data Architect`

QUICKSTART

Mac/Linux
curl -fsSL https://5tran.co/wizard-install-mac | sh
Windows
irm https://5tran.co/wizard-install-windows | iex

Now run `wizard` in your command line to finish setup
